Academic research
ecosystem is
complicit in
deepening **disparity**

My work...

- Risks and opportunities of emerging systems
- Outliers and marginalized minorities

Ursula Franklin's Technology:

- "**Technology** involves organization, procedures, symbols, new words, equations, and, most of all, a mindset."

Favoured research methodology

Research Ethics vs. Inclusive Co-design

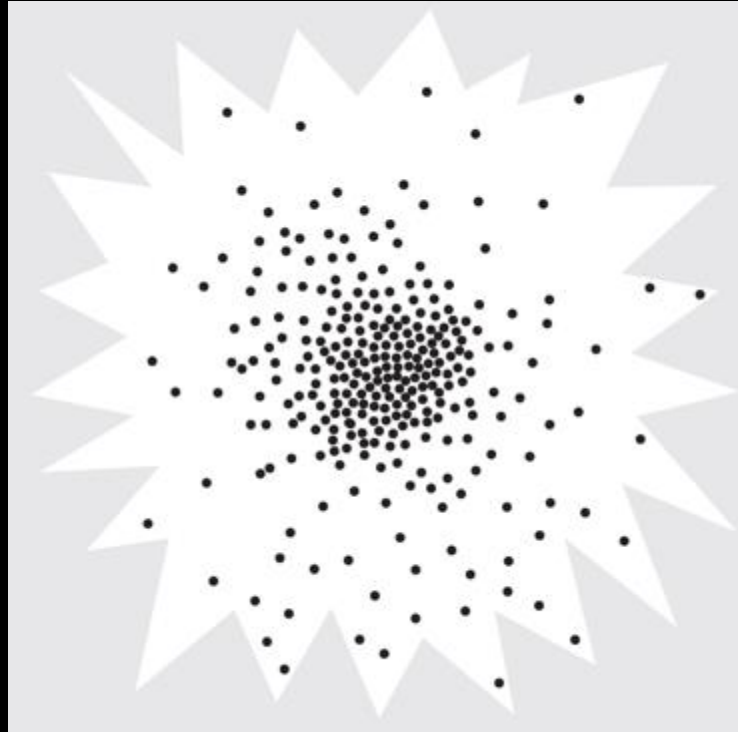

Not....

- Passive subjects of research
- Predetermined plan and focus without agency or attribution
- Notions of informed consent

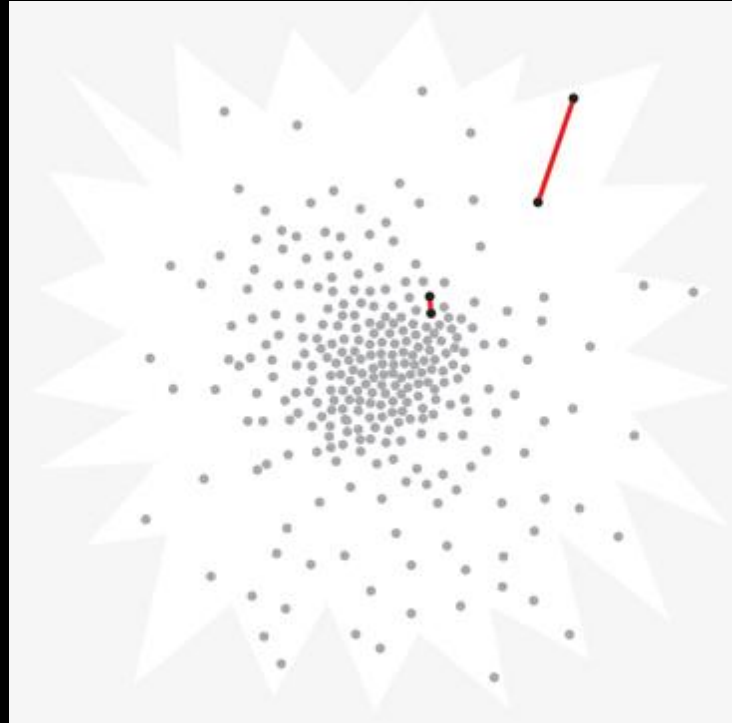

Disability & data..

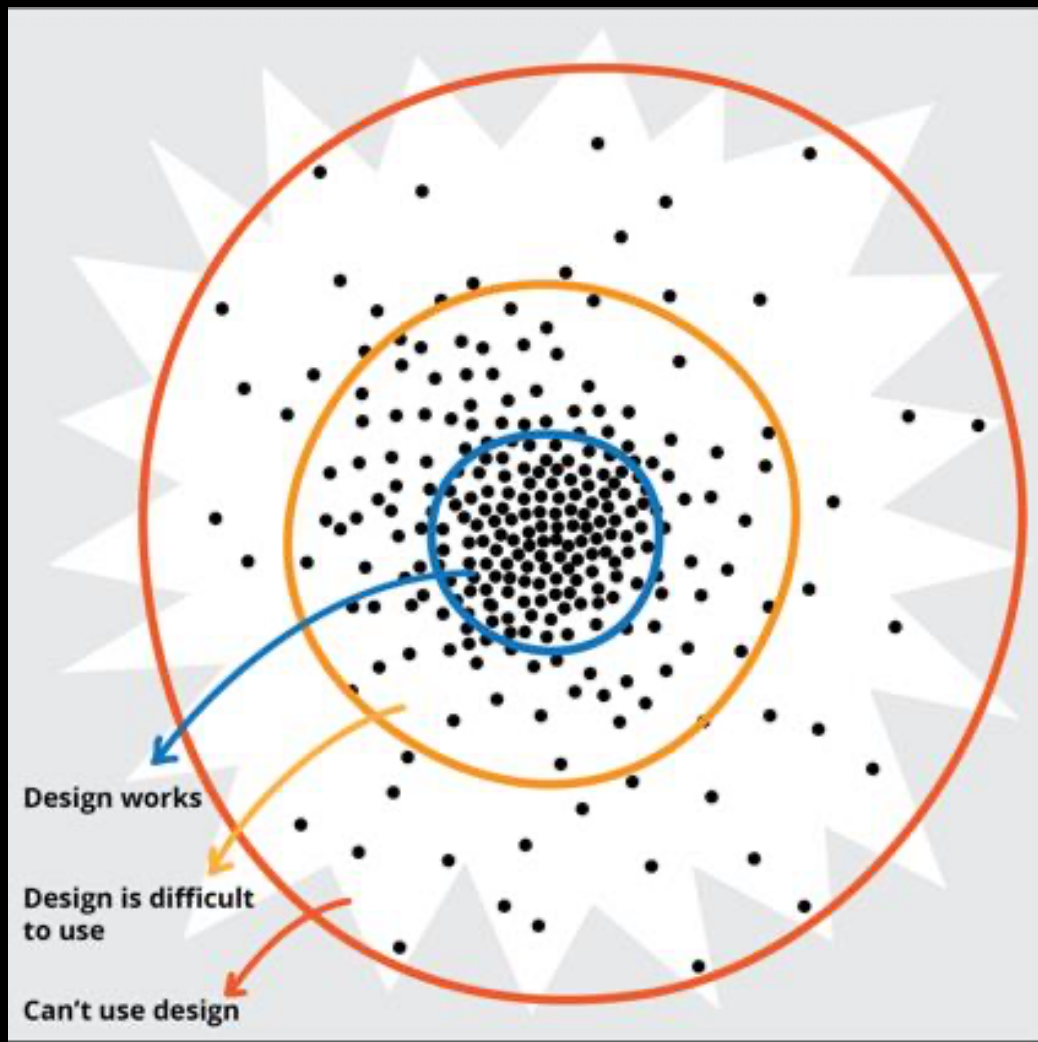

My data set of human
requirements....

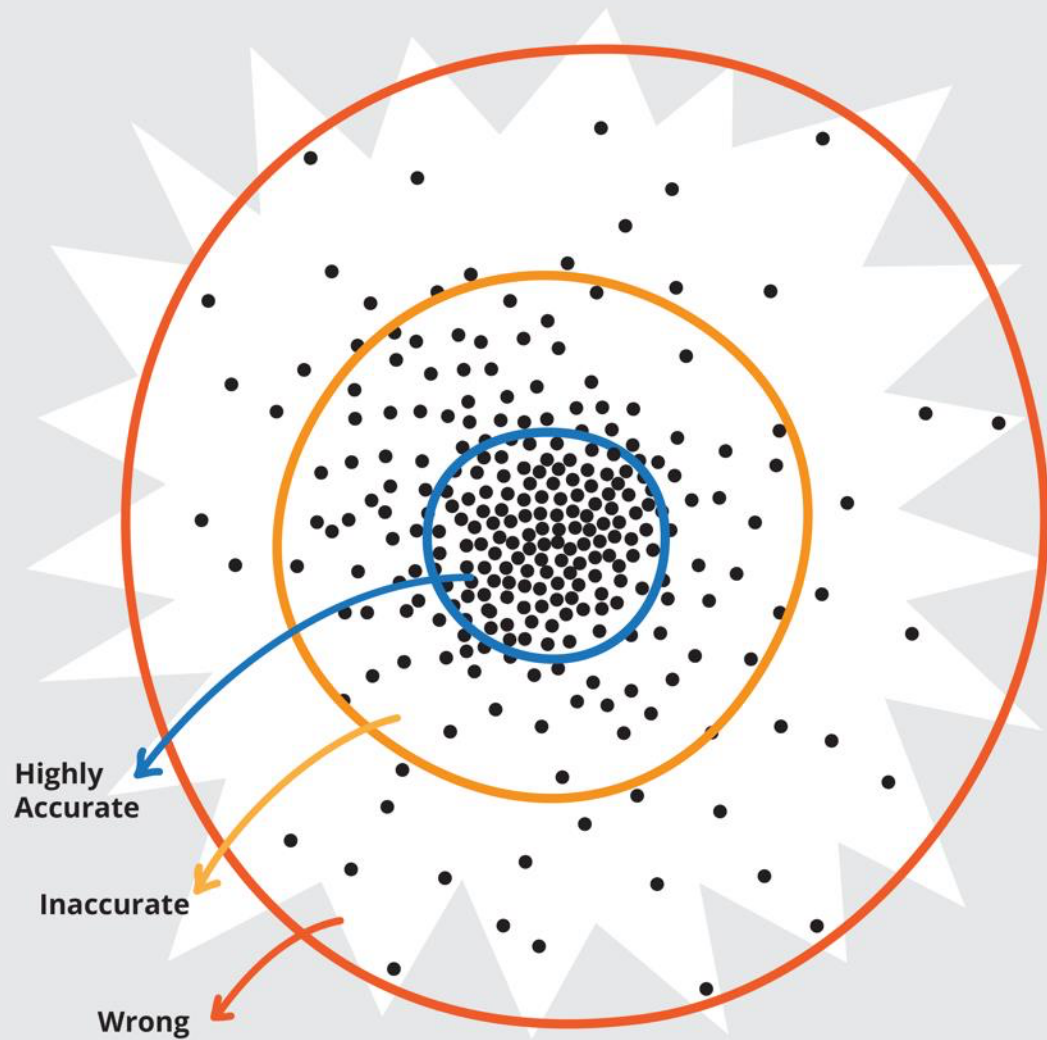

Our human starburst...

Difference...

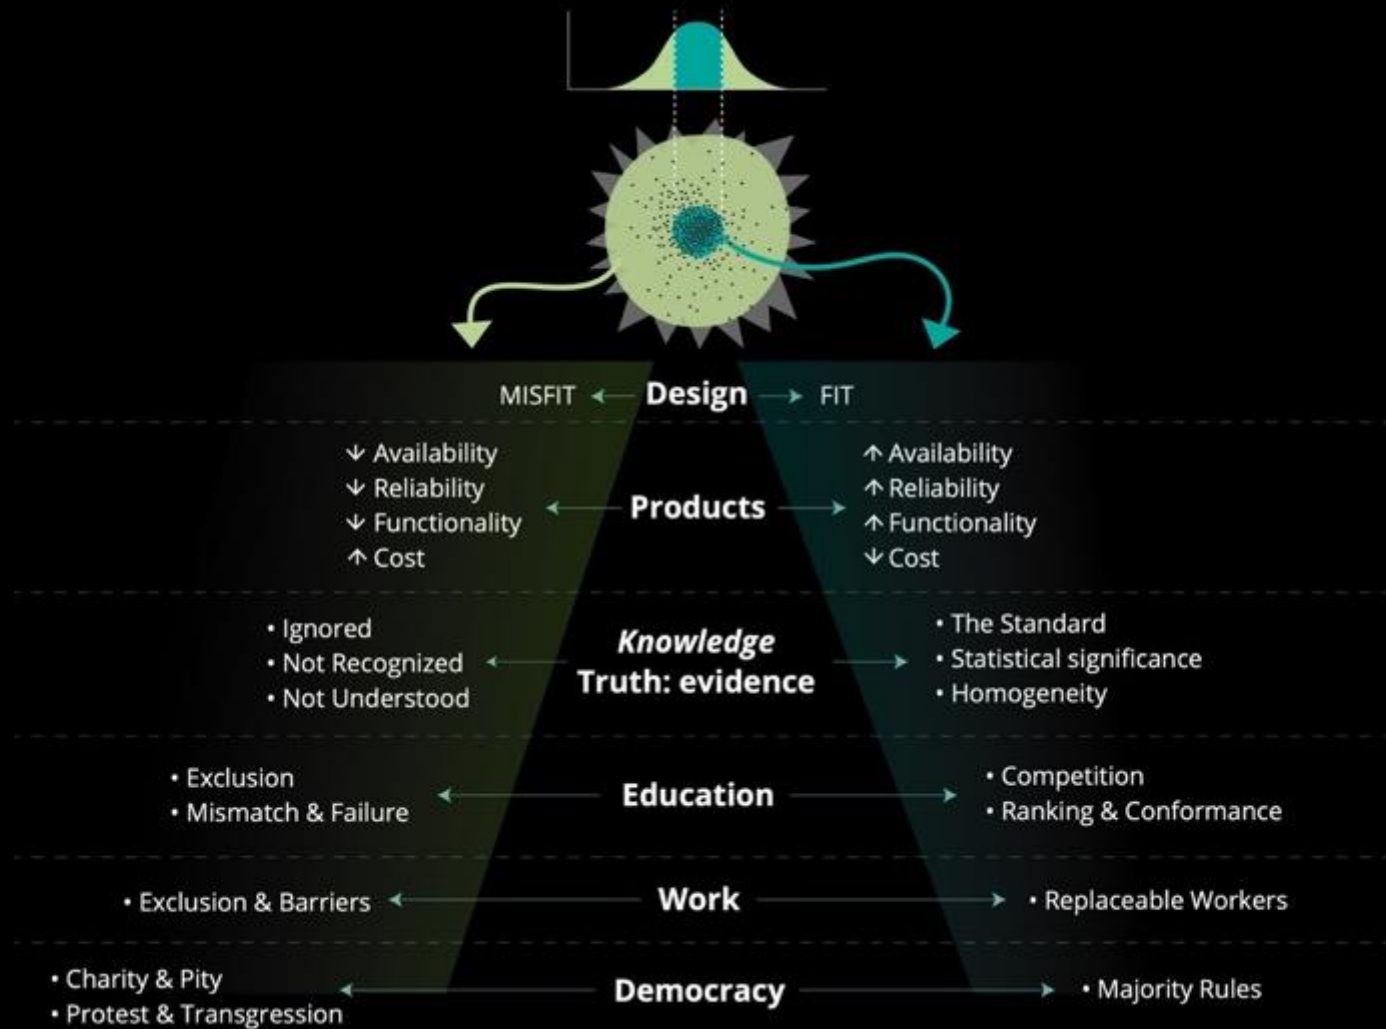

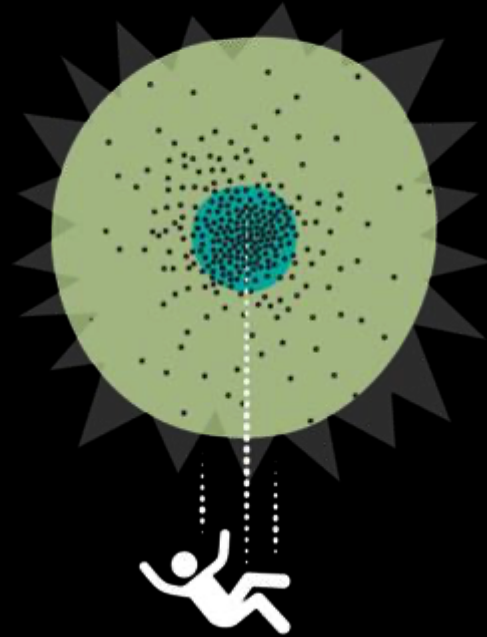

Statistical reasoning
as the means of making decisions
does harm

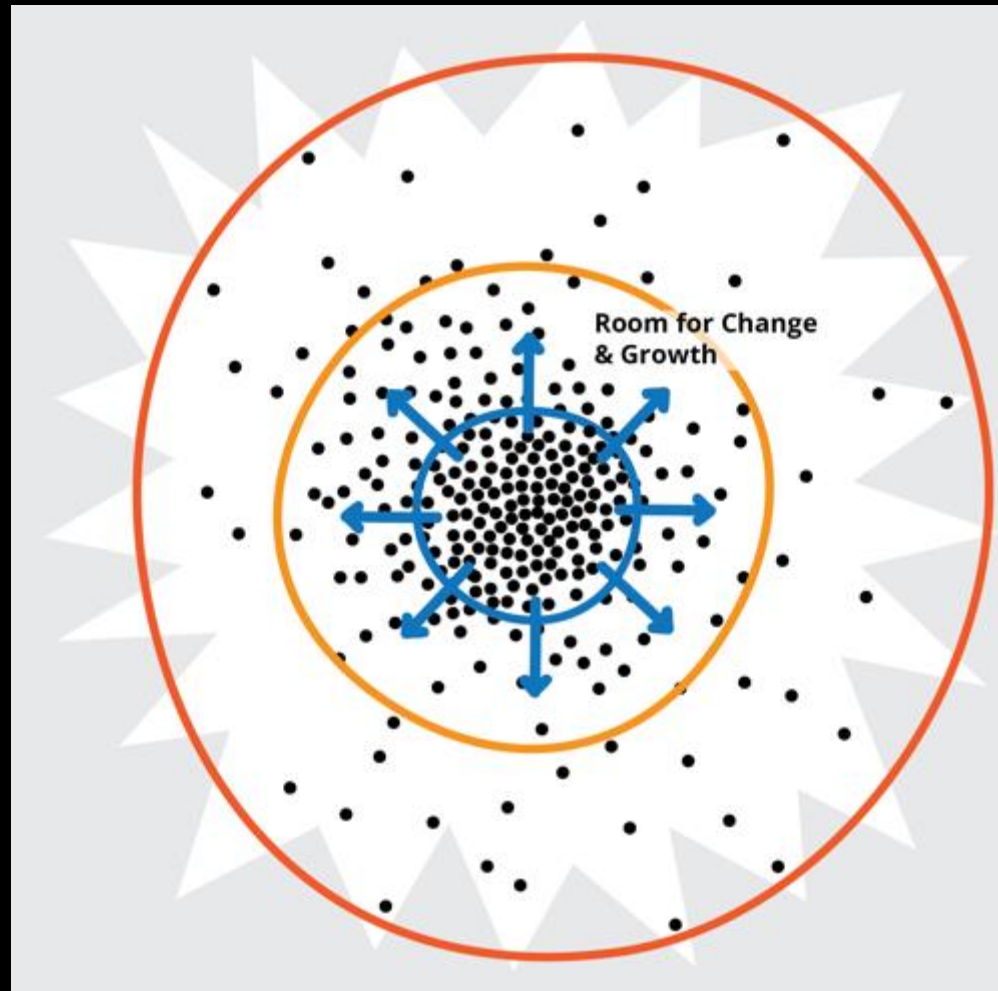

Assuming that what we know about the
majority applies to the minority does
harm

The prediction with the greatest probability

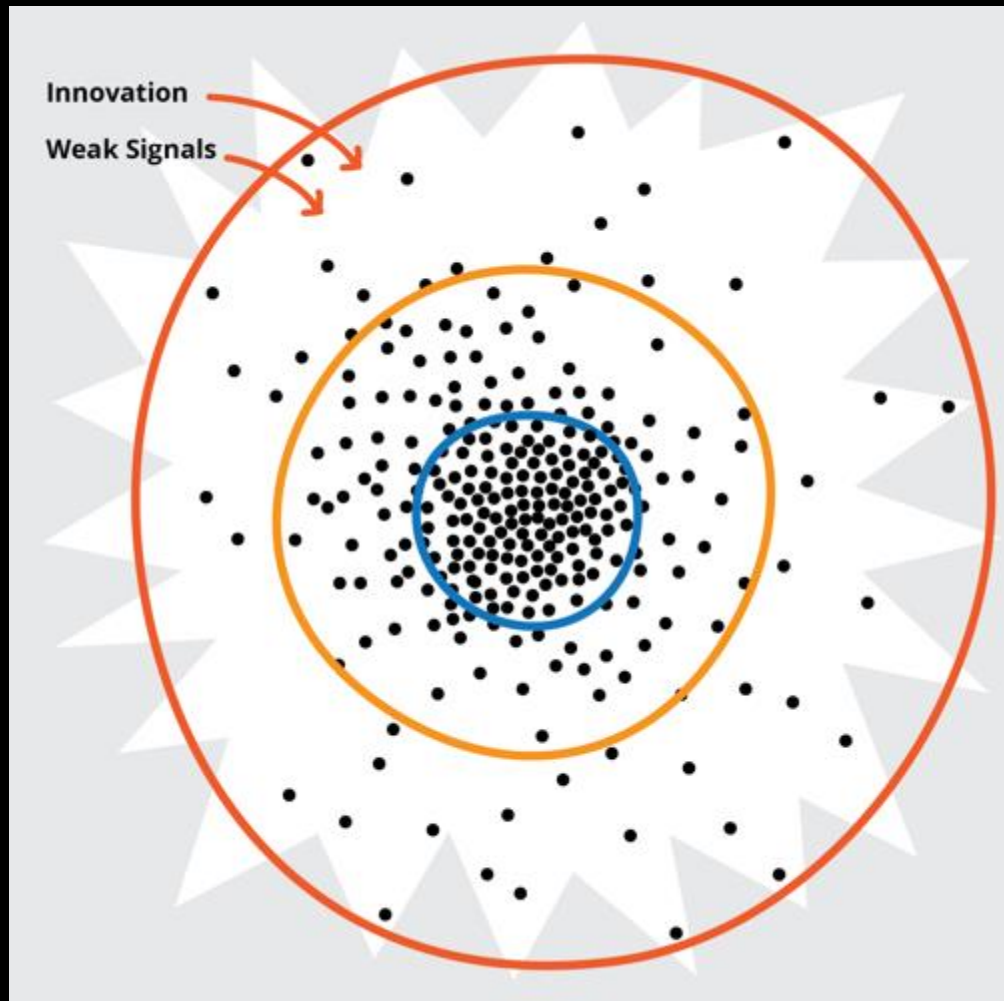

- Anytime
- When you least expect it
- Greatest Probability

Innovation

Weak Signals

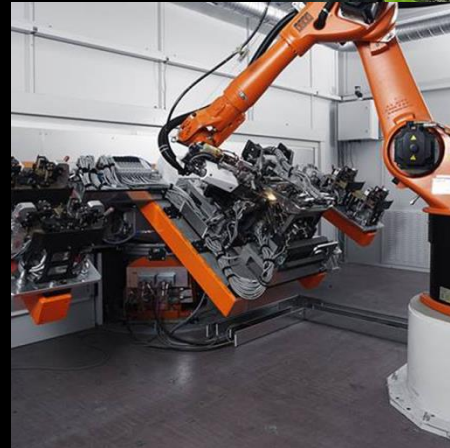

AI is amplifying, accelerating and automating the same pattern.

What is AI?

... a statistical reasoning machine

feeding on available data

a power tool...

More
efficiently,
accurately,
consistently..

Statistically finding or producing the...

typical

popular

normative

predictable

statistically average

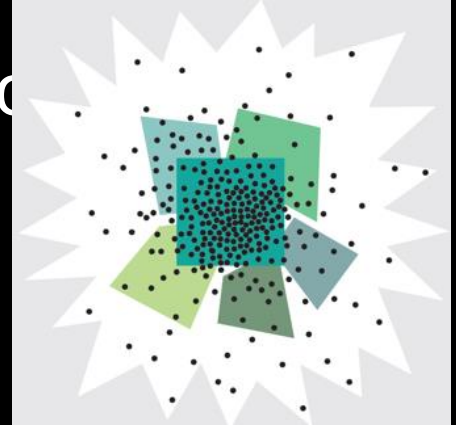

If you have a disability the
opportunities and risks are at the
extremes

Harm and incident databases

- Disproportionate reports related to disability
- Examples: parents with disabilities falsely flagged as unfit, false positive tax audits, false positive security flagging, excluded from optima filtering in employment, biased credit and asset rating, unfairly denied mortgage and loans, unfairly high insurance rates, deprioritization of relevant information, iatrogenic death and illness...

Statistical Discrimination in AI Ethics Measures

- Insignificant when determining impact metrics and thresholds
- Invisible or insignificant in error testing and risk-benefit framework
- No bounded cluster in cluster comparison

“an anomaly”

“merely an anecdote”

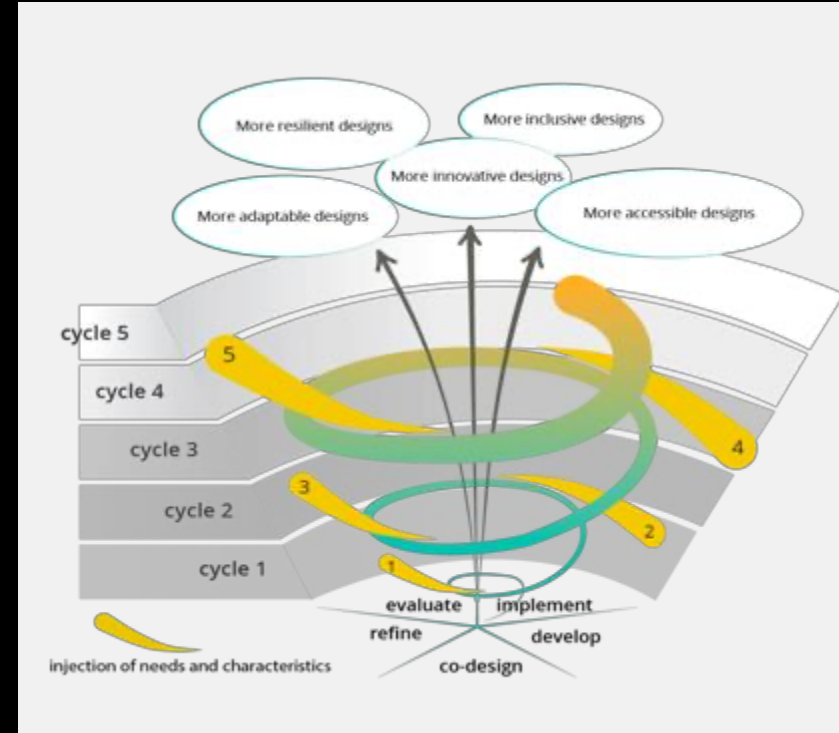

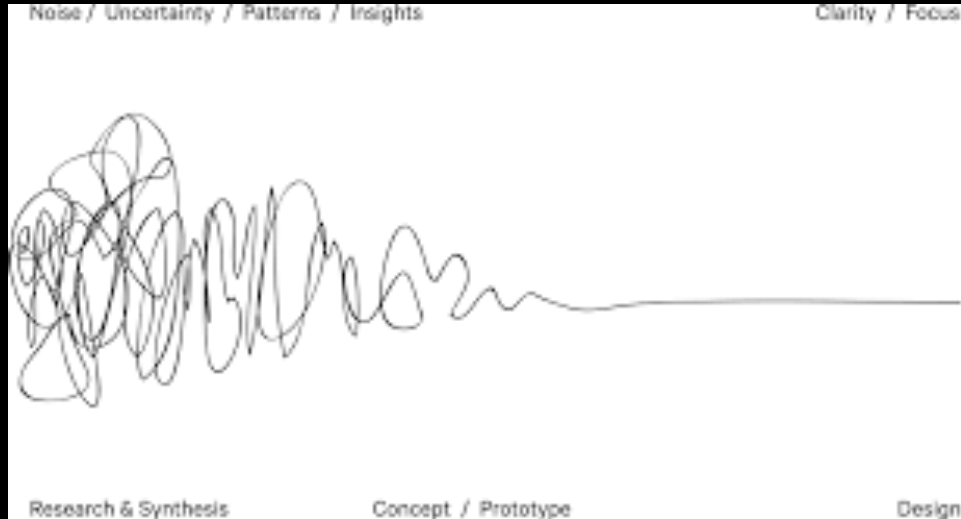

AI as a mirror

When our processes are guided
by individuals who have lived
experience of struggle &
adversity, our systems will
function in times of struggle and
adversity.

From the Design Thinking Squiggle to the **Virtuous Tornado**

Inclusive Design..

1. Recognize diversity, variability, & self-knowledge in integrated design
2. Inclusive process – co-design – diverse team- “who is missing?”
3. Benefit-for-all - intervention in complex adaptive system, culture change

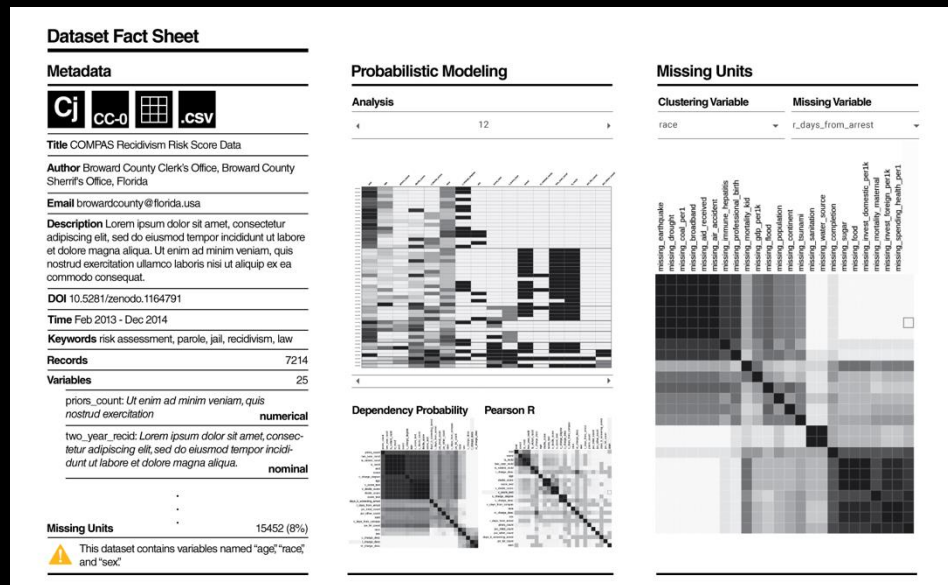

Flipping the perspective

- Focus on the novel and unique
- Inverting the metrics

Prevent Harm

- "Trust meter"
- Suitability of decision system to instance before you
- Based on data used to train AI

Pushing benefits to where they are needed the most...

Filling the regulatory vacuum...

Accessible and Equitable AI
Standard

for the Accessible Canada Act

... and the EU

Intelligence that works with the edge of our human scatterplot is better able to ..

- Adapt to change & respond to the unexpected
- Detect risk
- Transfer to new contexts
- Results in greater dynamic resilience & longevity
- Will reduce disparity
- May hold the key to our survival
